Building Notes

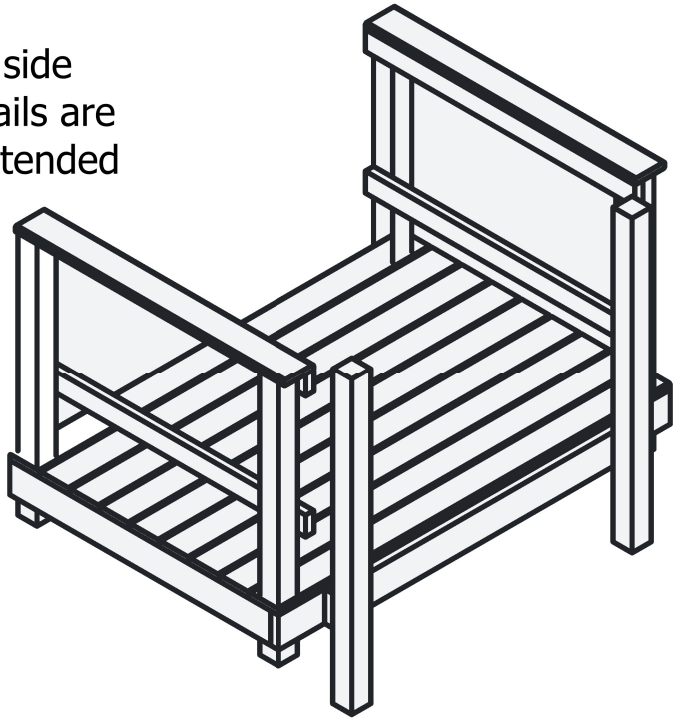

- Ramp
  - Frame is the most difficult part measure it
    - Add extra support to the middle to the ground
  - Calculate the slope of ramp when frame is built
    - Build the full 10ft box first
- Back Deck
  - Big ol concrete steps
    - Need to be remove, possibly broken in place
  - The steps should be in between 6-8 inches in rise
    - The steps should be connected to the deck

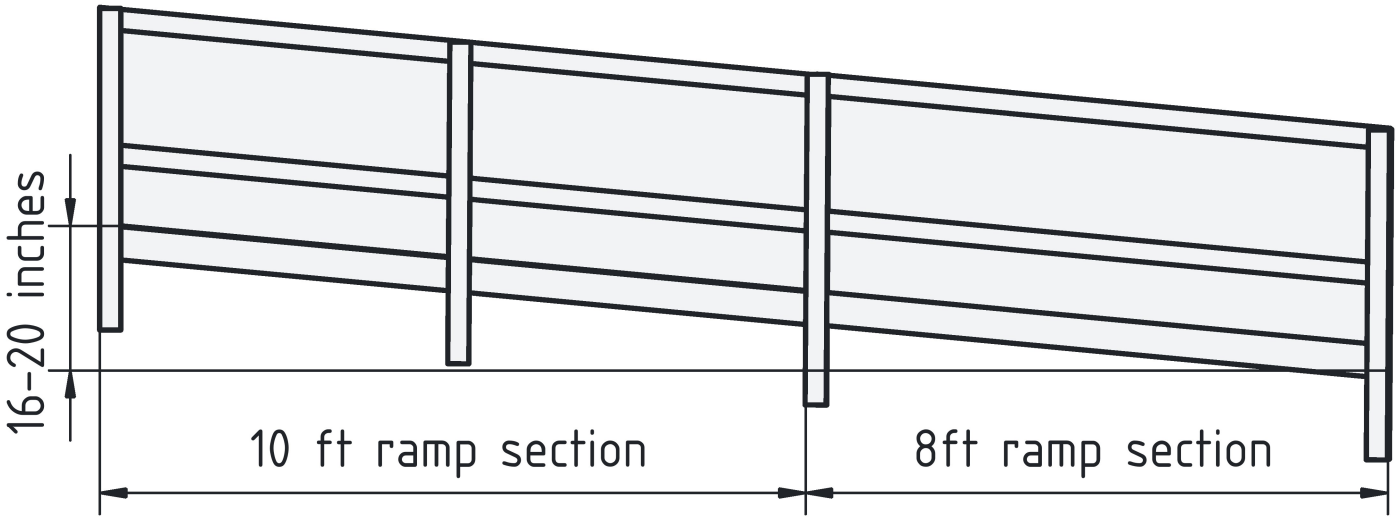

This frame will fit inside the metal posts

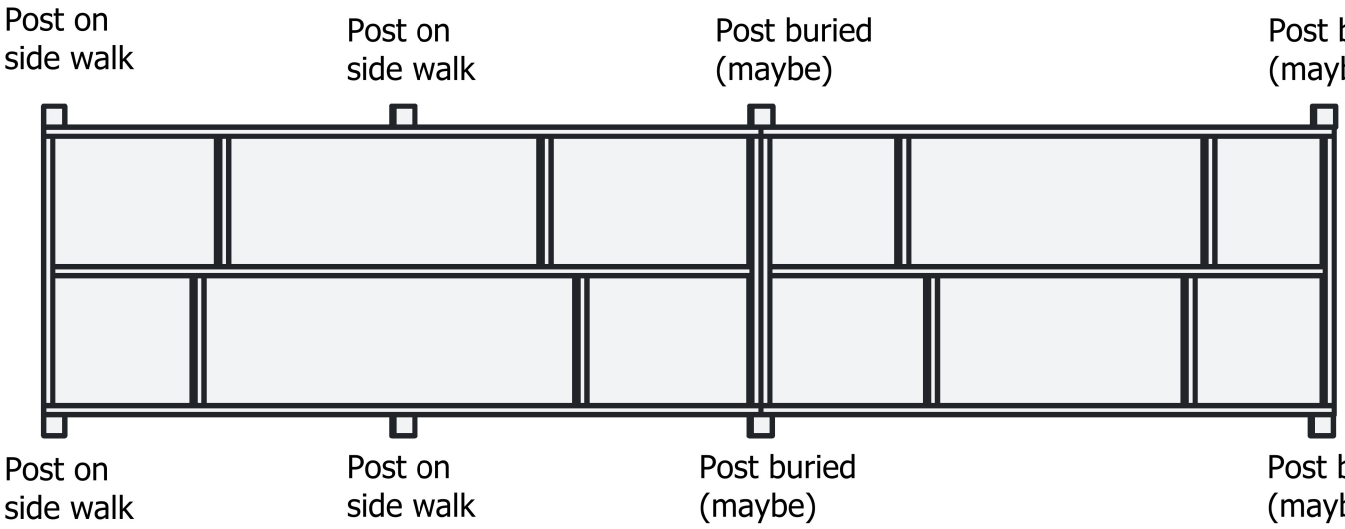

Ramp side handrails are not extended

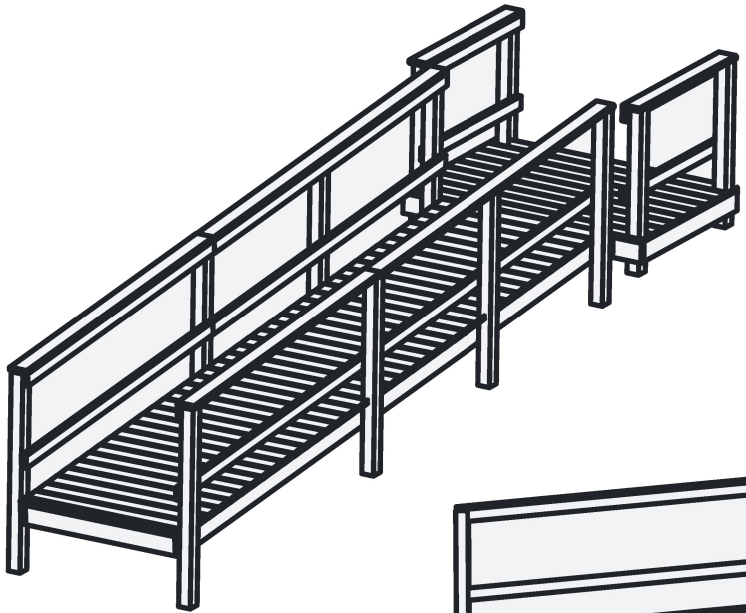

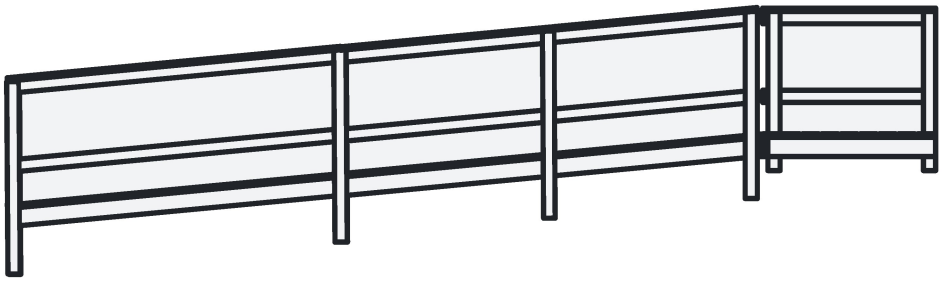

Check slope when the ramp is built, tan-1(drop/length)

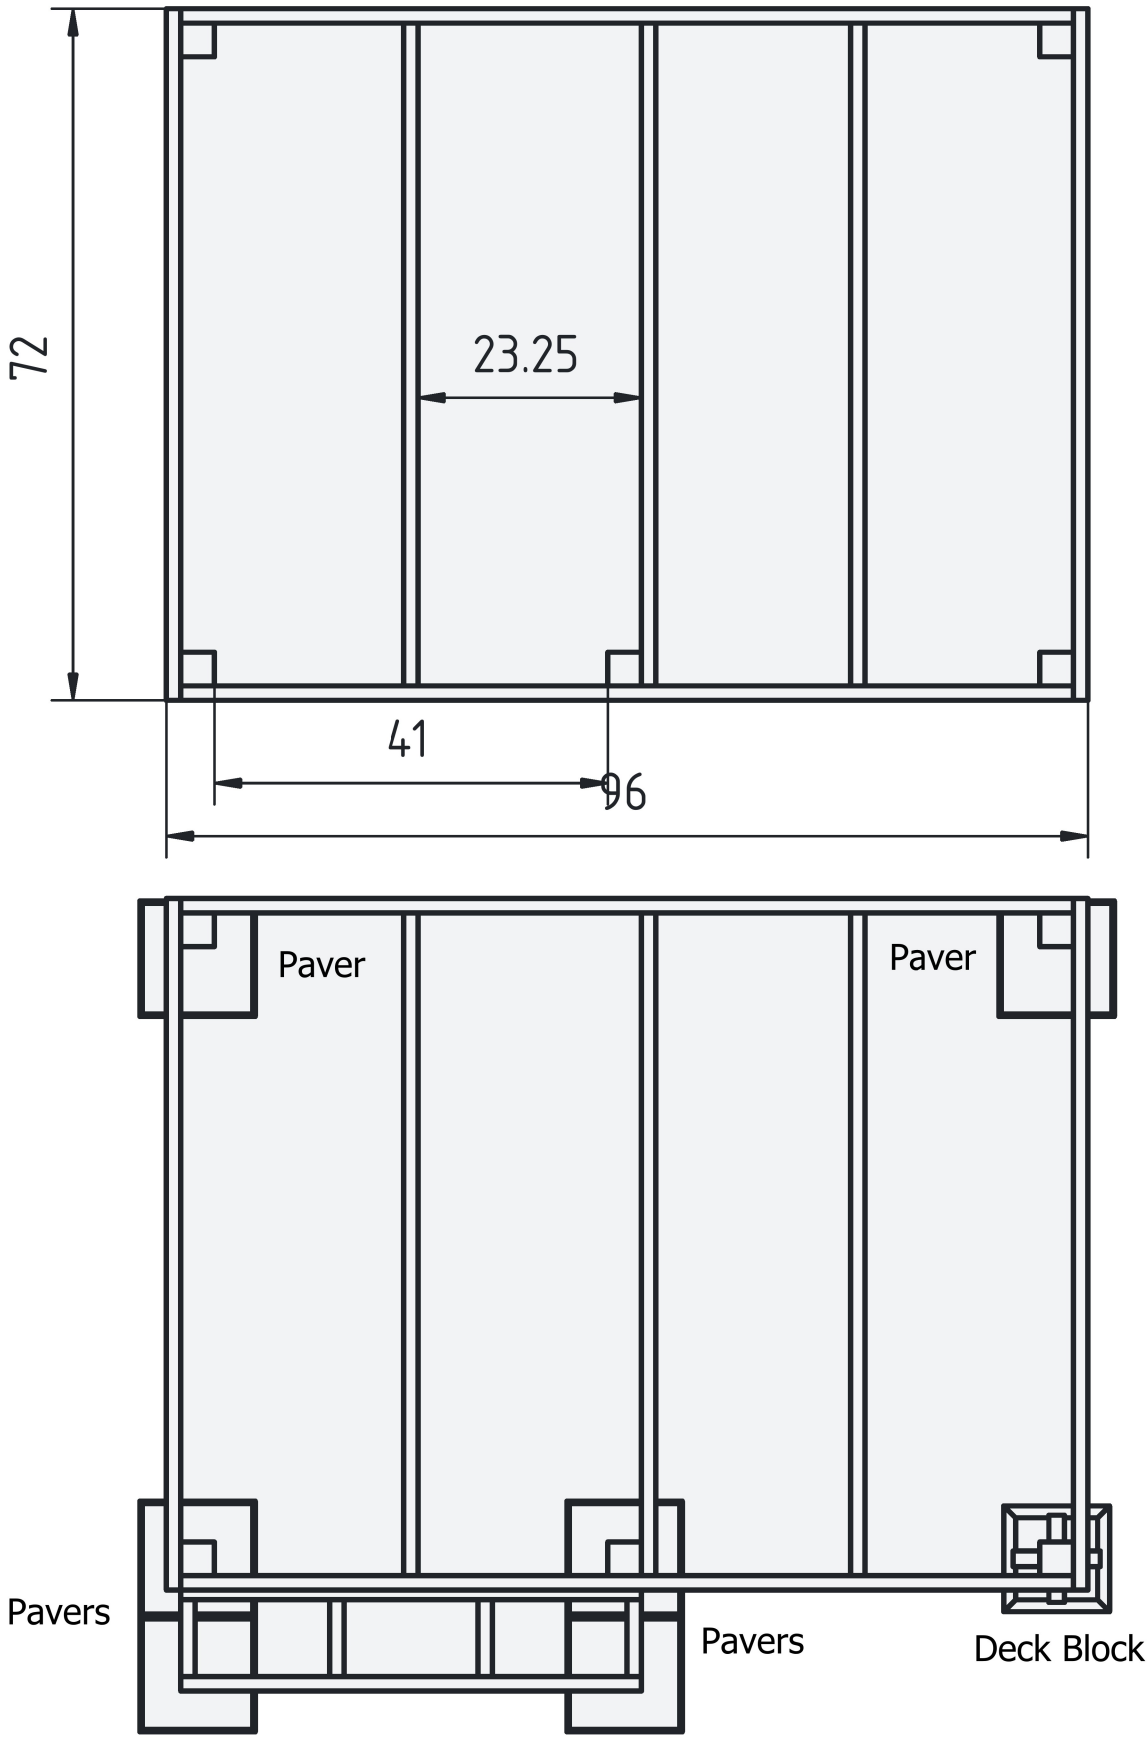

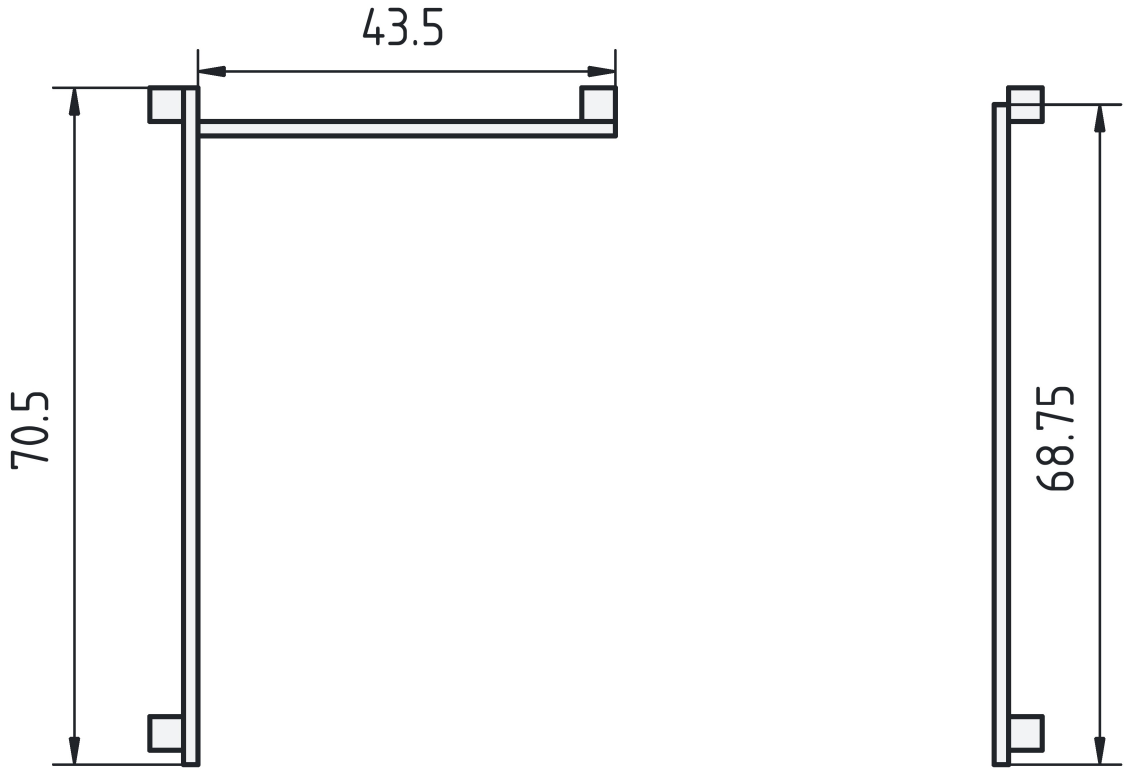

The sidewalk is 3 feet 11 inches, box is 4 feet

The last box will be cut level to the side walk
